

Each Satellite and Satellite LED+ flex strip measures 44" long and features 7 locations which can be cut. The only tool required for cutting the strip are the silicone endcap (included) and scissors (not included.)

Instructions

Step 1:

Lay items out on a flat surface. Determine the ideal / desired length of the LED strip.

Step 2:

Identify the closest cutting point to the desired length of the LED strip. Cut points are identified on the strip by a vertical line with +RGBW written vertically beside each line.

WARNING: Do not cut the LED strip in any other location. Doing so will void warranty.

Step 3:

Carefully cut LED strip at the desired vertical cut point using scissors.

Step 4:

Remove a small portion of the adhesive tape at end of strip and slide silicone cap in place.

Step 5:

Install LED strip using adhesive and included silicone clips, complete installation as per the included instructions. After installation, please register your product at current-usa.com.
