

LOW LIGHT SYSTEM	MEDIUM LIGHT SYSTEM	HIGH LIGHT SYSTEM
Intended for fish-only systems or low-light requiring plant tanks. The overall look enhances the appearance of the inhabitants, allowing the tank to stand out in the room.	Intended for fish-only system, medium to high light-requiring plant tanks, and soft coral aquariums such as Mushroom anemones and leather corals. The overall look is bright and allows for a more diverse collection of species than low-light systems. Many higher light-requiring corals, such as Large Polyp Stony corals (LPS) can be sustained if placed higher in the aquarium.	Intended for high light-requiring plant tanks and most coral species, including Acropora, Small Polyp Stony corals (SPS) and Tridacna clams. The overall look is very bright, often accompanied by a shimmering effect. Lower light corals can also be kept in this lighting, but should be placed lower in the aquarium or under rock overhangs. For tanks with a depth of 28" or deeper, we recommend using 250 watt Outer Orbit HQI/T5HO, SunDial or SunPod systems.
