

STEP 1: Cabinet & Aquarium Installation

IMPORTANT LOCATION INFORMATION!

- Follow leveling instructions below (it will save you a lot of work!)
- Ensure floor is level and can support a minimum of 425 lbs./square inch.
- Avoid locations near AC/Heating vents or facing direct sunlight.
- Ensure the power outlet used with your aquarium is a 120VAC GFCI outlet and rated for 750 watts.

- 1** Place aquarium cabinet in desired location.

- 2** Allow a minimum 3.5" from wall for background light installation and aquarium maintenance.

- 3** Use included leveling device and place on cabinet top to ensure stand is level.

- 4** Adjust cabinet leveling feet if needed.

- 5** Carefully place aquarium on stand.

- 6** Place level on glass aquarium edge and confirm aquarium system is level. Adjust leveling feet if required.

- 7** Slide filter tube clips out from under cabinet.

8 Install suction and return tubes.

9 Secure both tubes in place.

10 Carefully place SERENE light fixture, move towards back (leave room for aquascaping.)

11 Place background light into back cabinet clips.

12 Connect LED light to controller (insert then screw tighten), slide-in background light USB plug, then connect small audio speaker plug.

13 Place remote holder to desired location using 3M adhesive.

14 Adjust door open/close magnet to ensure door opens when pushed.

15 Adjust door hinges if required by turning hinge adjustment screw.
